# map of journals in Web of Science

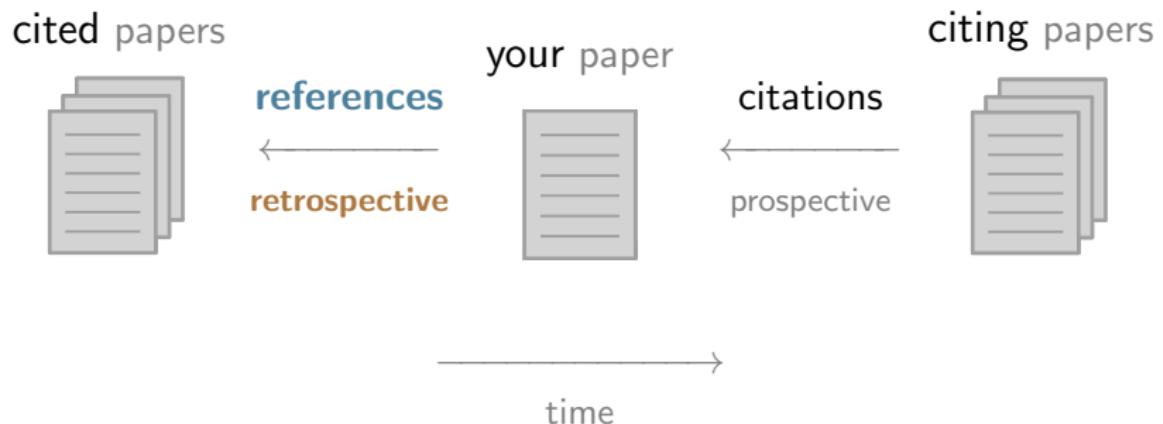

Rosvall, M., & Bergstrom, C.T. (2008) *P. Natl. Acad. Sci. USA*, **105**(4), 1118–1123.

## papers & journals evolution in Web of Science

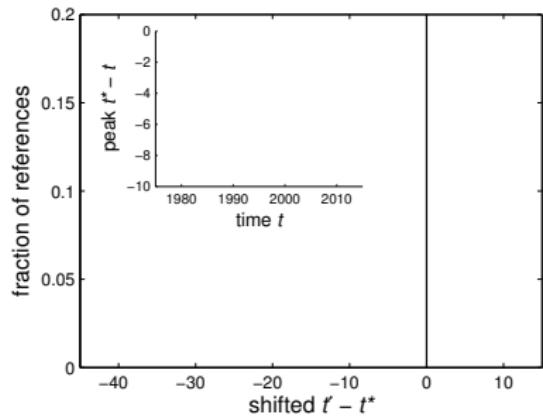

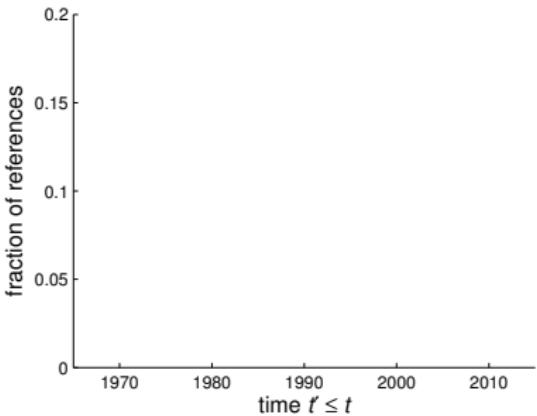

paper & citation growth well approximated by  $n_t \sim e^{\beta t}$

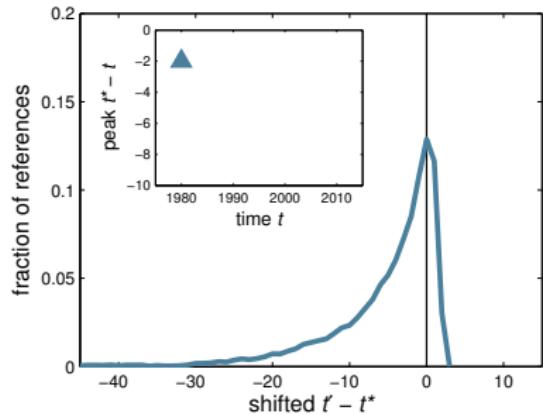

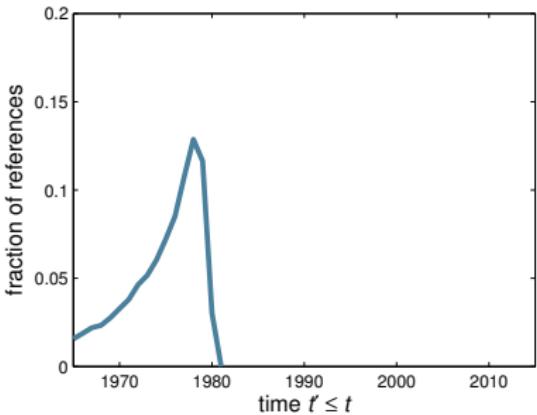

## paper **reference age** in **Web of Science**

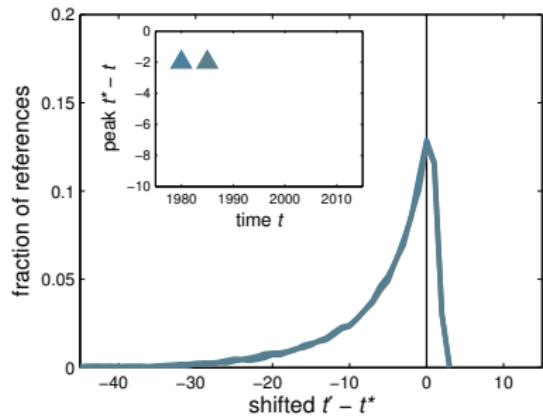

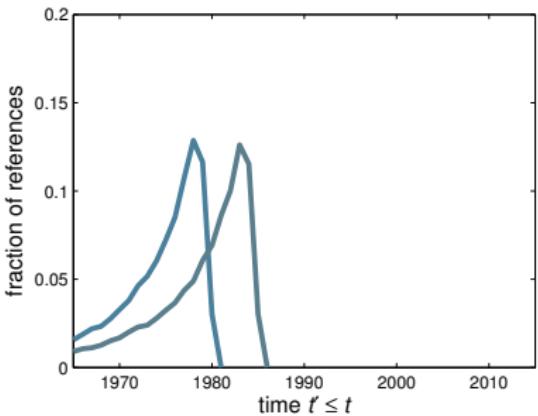

## paper reference distributions for physics

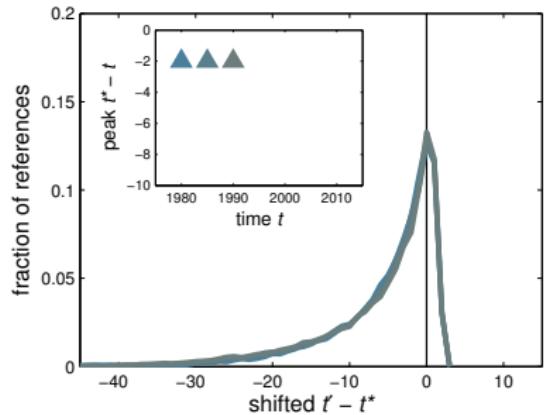

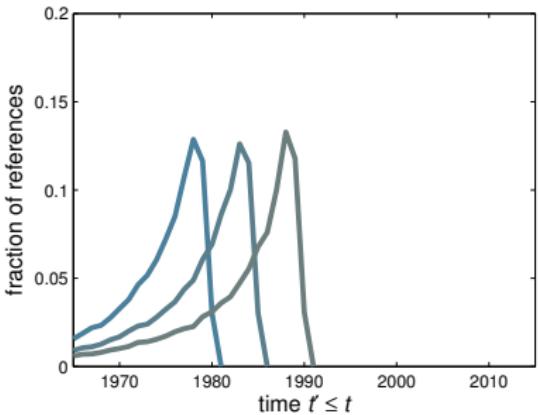

## paper reference distributions for physics

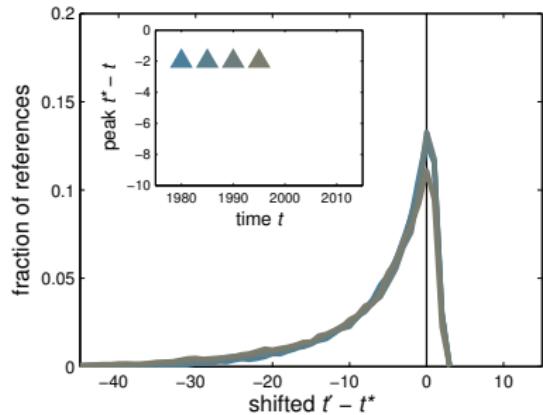

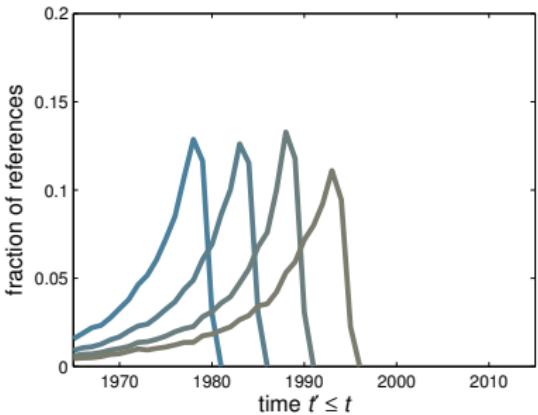

## paper reference distributions for physics

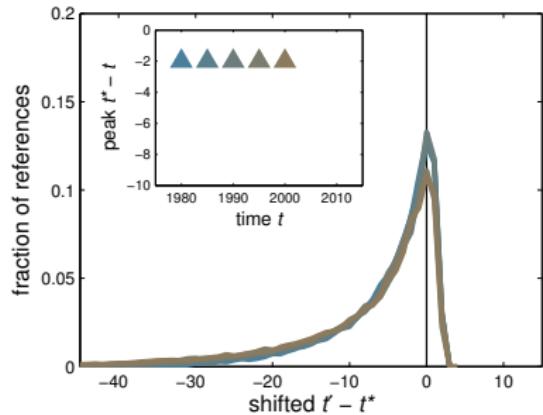

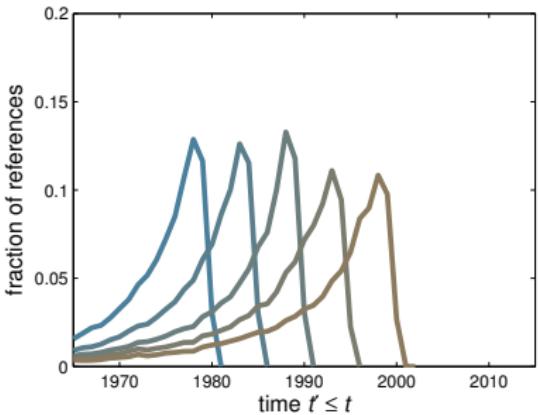

## paper reference distributions for physics

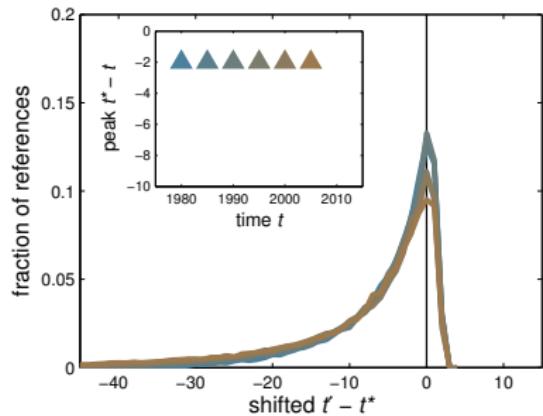

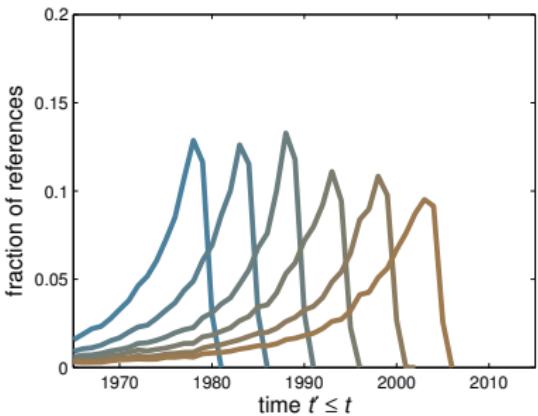

## paper reference distributions for physics

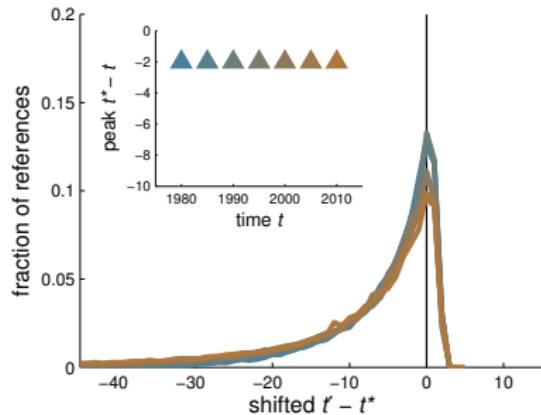

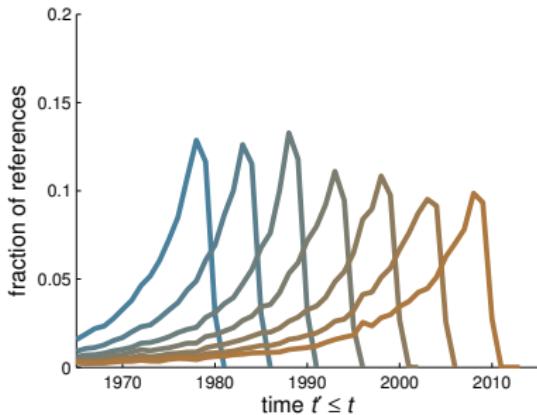

## paper reference distributions for physics

## paper reference distributions for physics

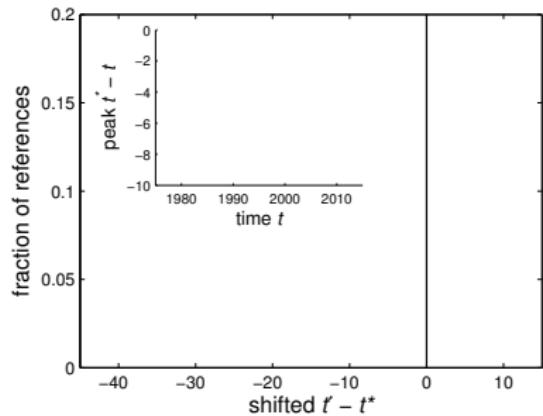

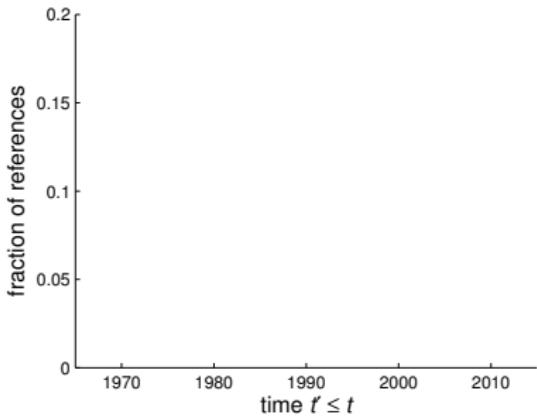

## paper reference distributions for physics

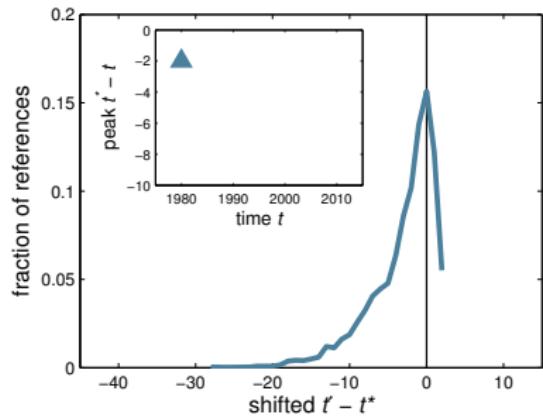

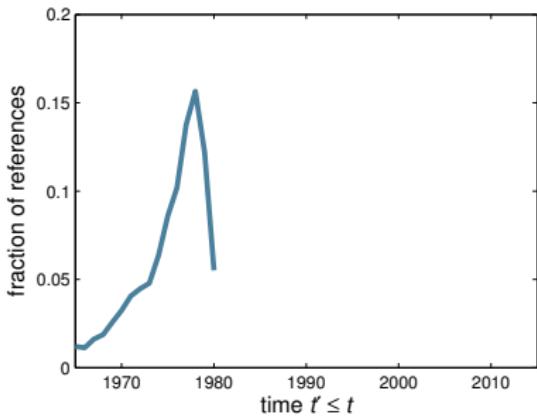

for  $t' \leq t^*$  distributions well approximated by  $\sim \frac{1}{t-t'} e^{\frac{-(\ln(t-t')-\mu)^2}{2\sigma^2}} - \beta(t-t')$

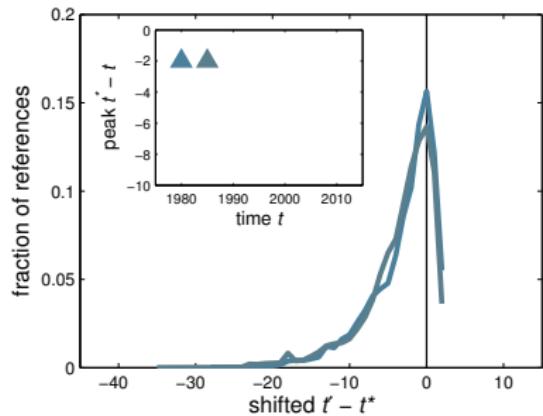

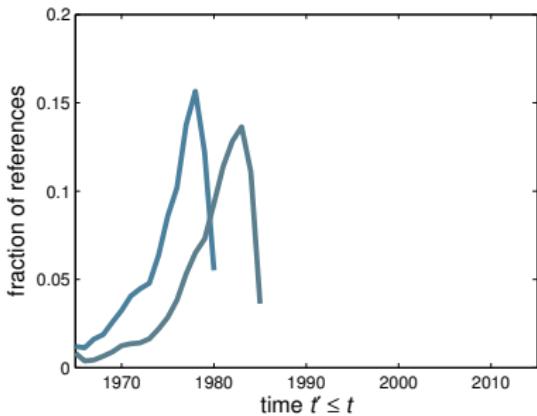

## paper reference distributions for computer science

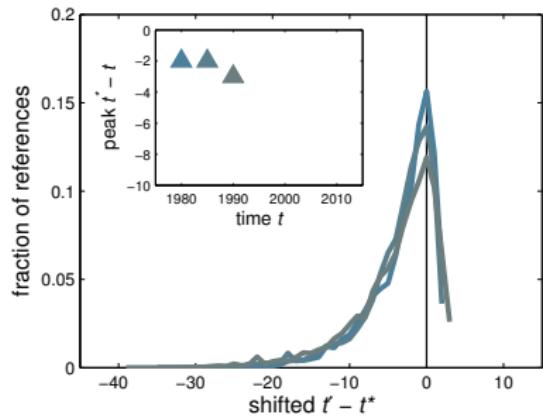

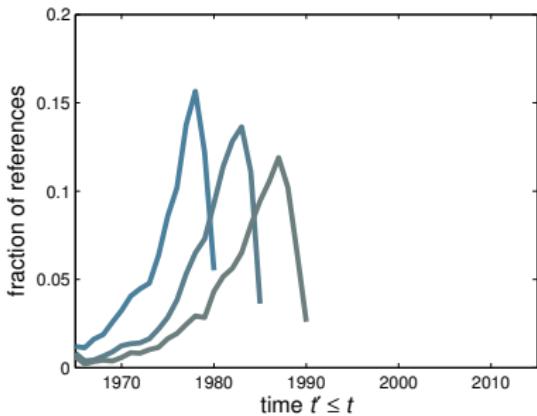

## paper reference distributions for computer science

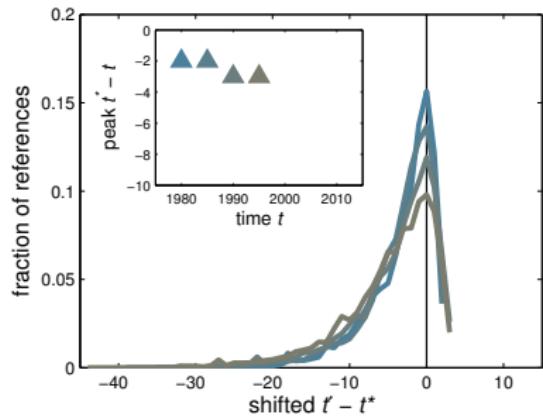

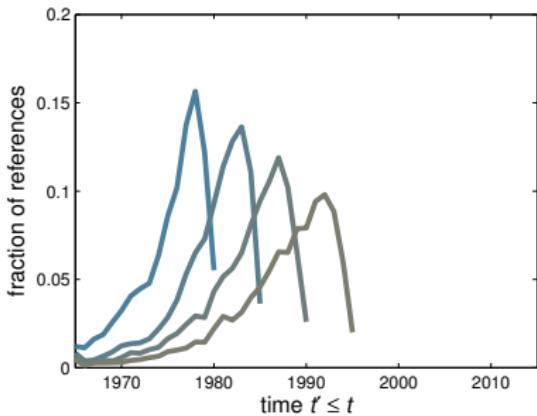

## paper reference distributions for computer science

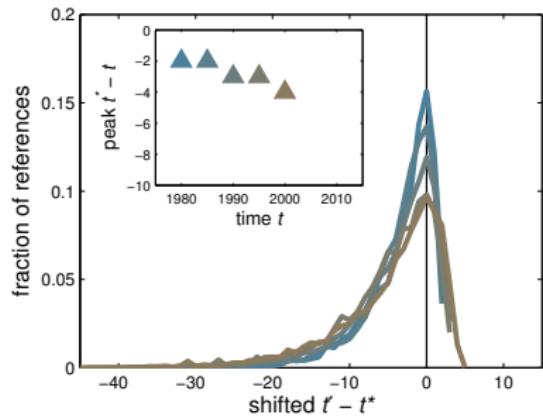

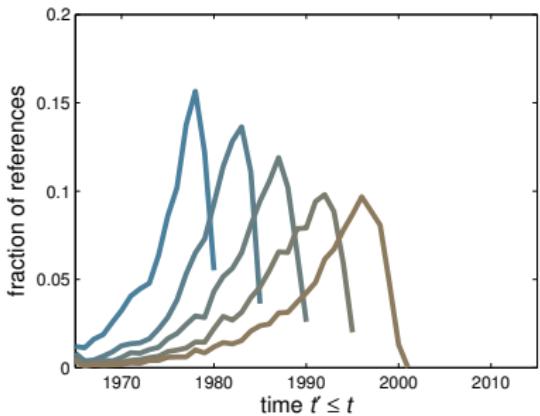

## paper reference distributions for computer science

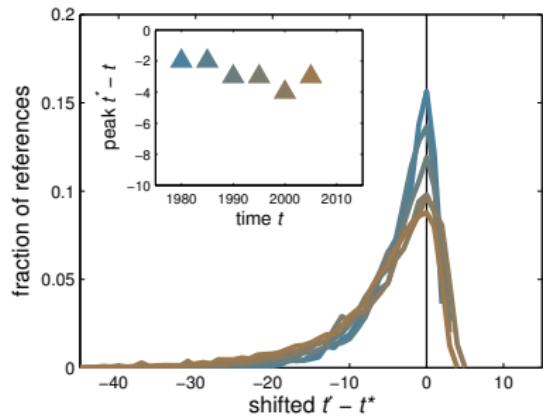

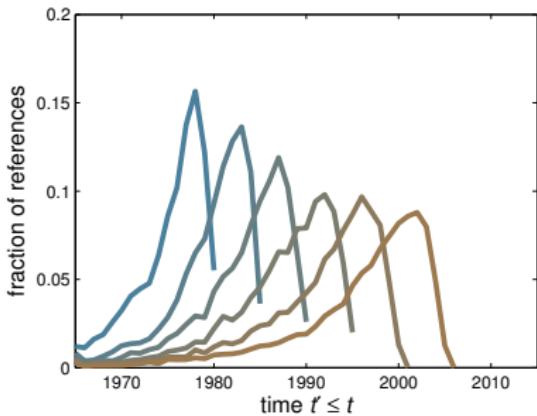

## paper reference distributions for computer science

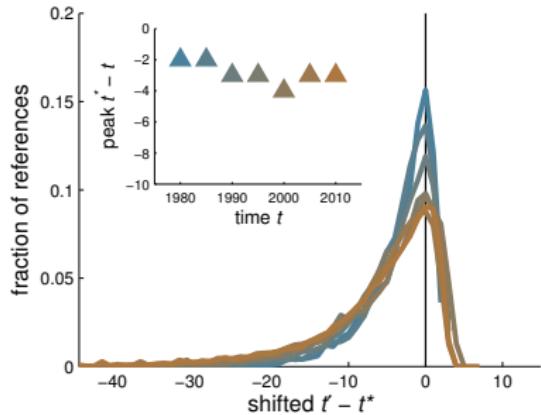

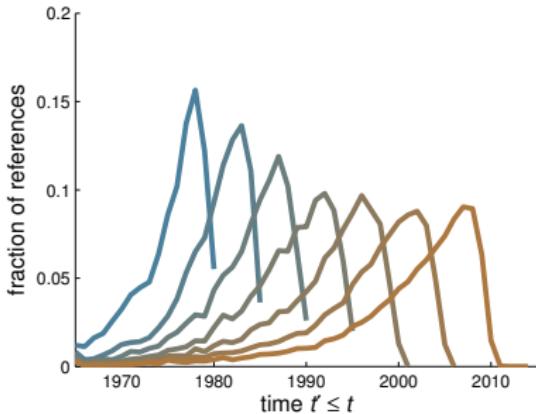

## paper reference distributions for computer science

## paper reference distributions for computer science

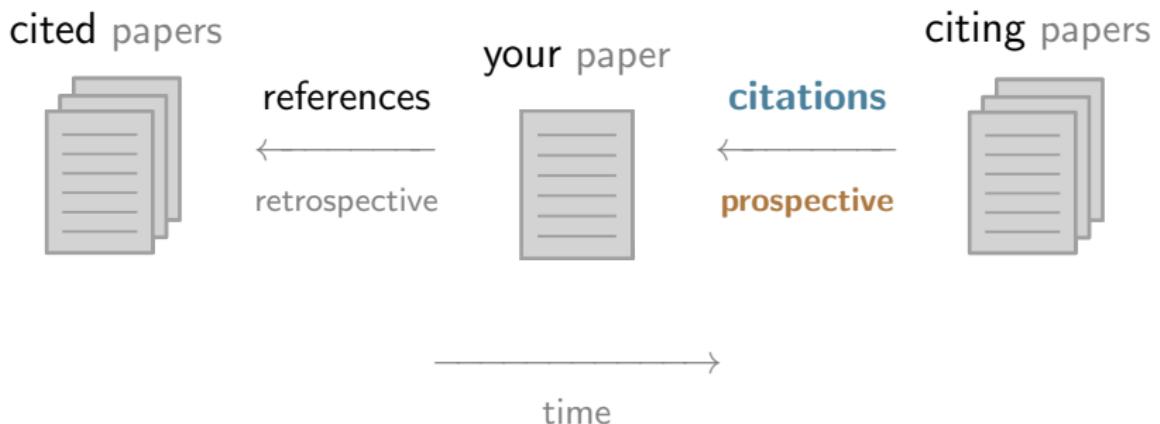

## paper reference distributions for computer science

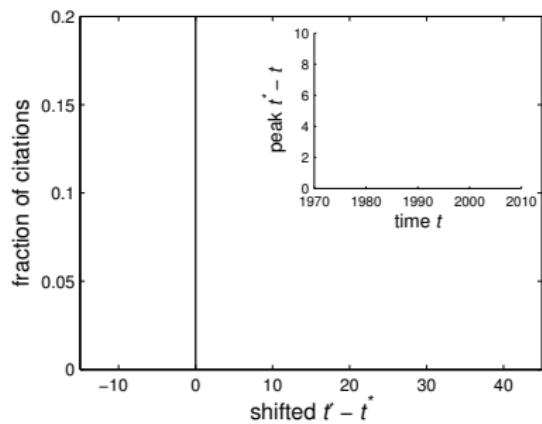

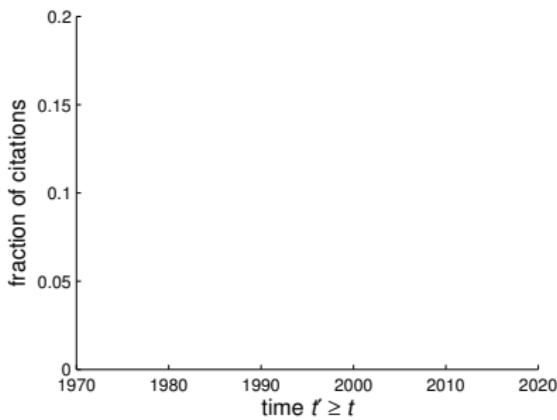

for  $t' \leq t^*$  distributions well approximated by  $\sim \frac{1}{t-t'} e^{-\frac{-(\ln(t-t')-\mu)^2}{2\sigma^2}} - \beta(t-t')$

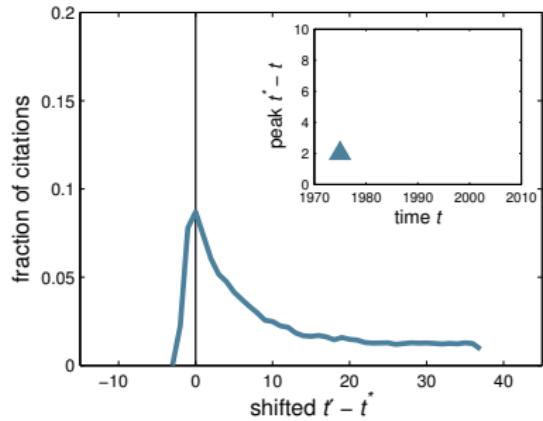

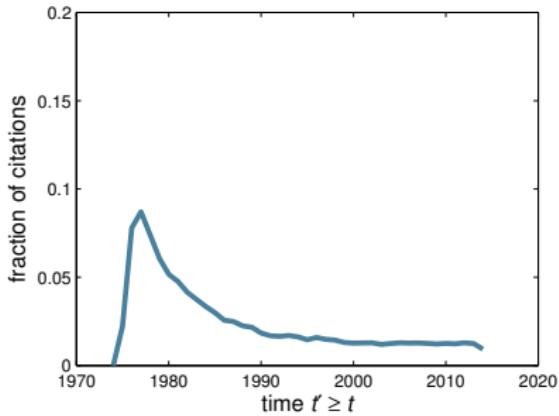

## paper **citation age** in **Web of Science**

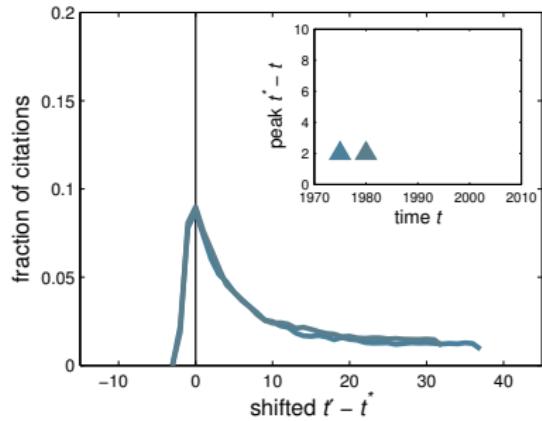

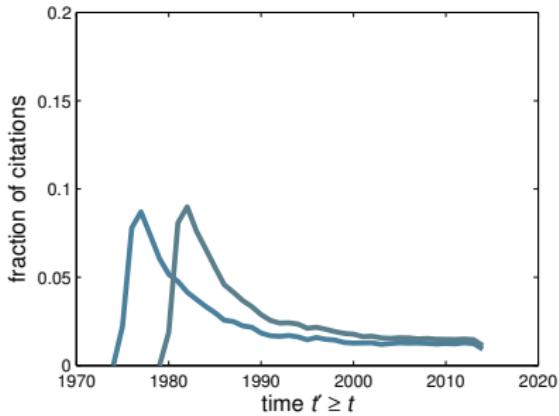

## paper citation distributions for physics

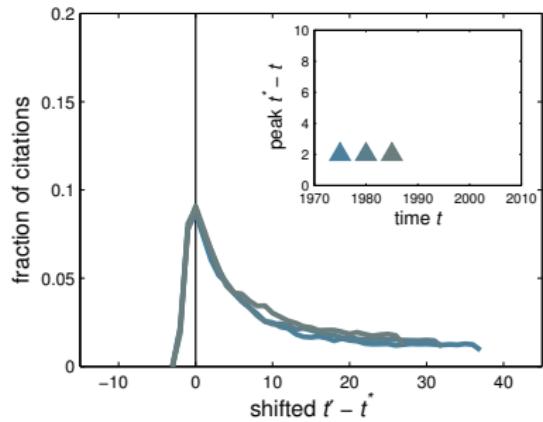

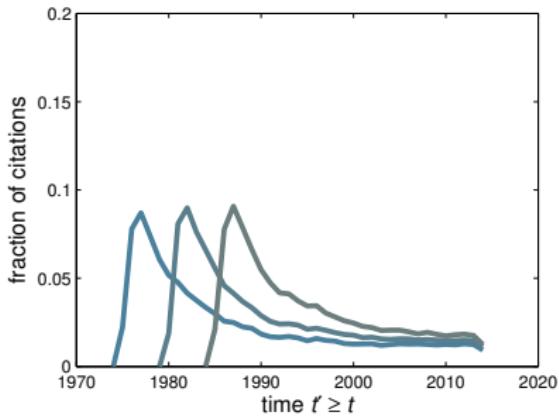

## paper citation distributions for physics

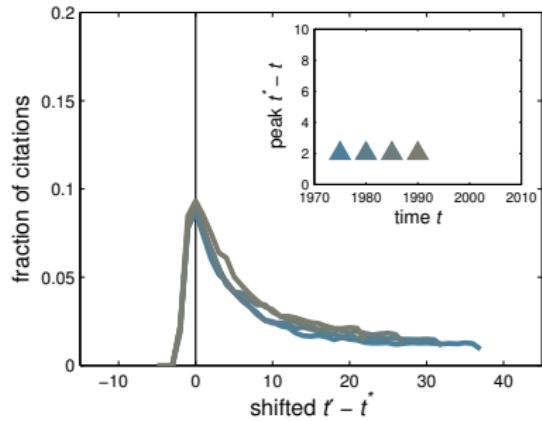

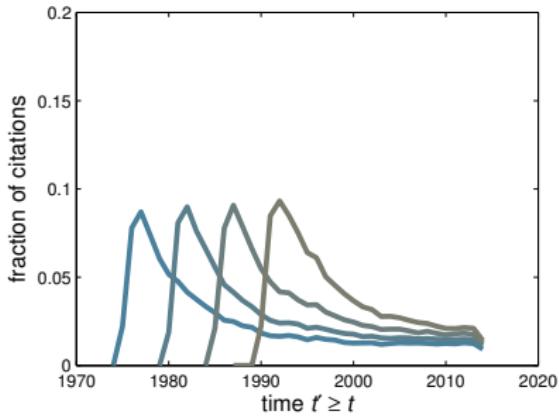

## paper citation distributions for physics

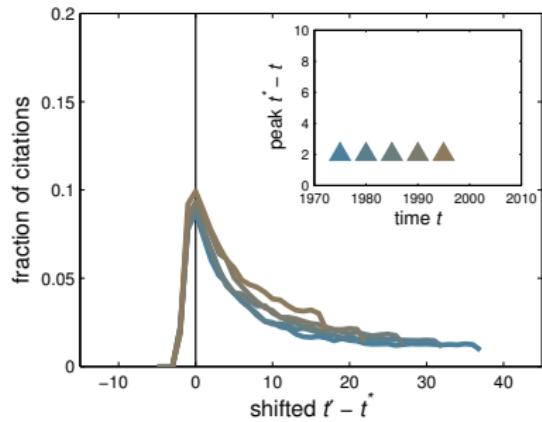

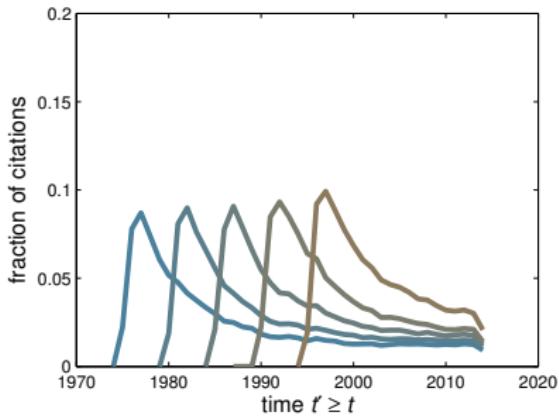

## paper citation distributions for physics

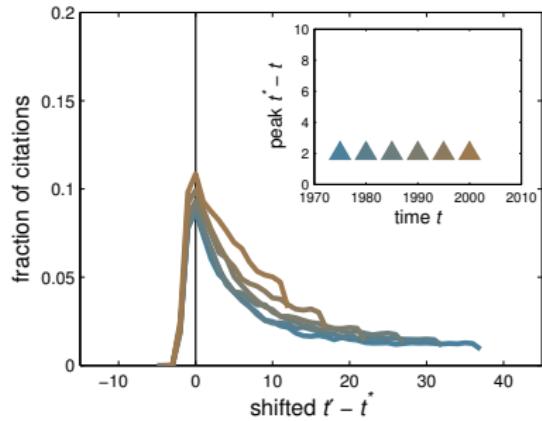

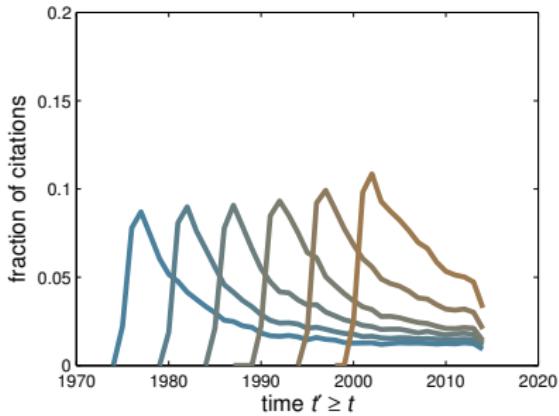

## paper citation distributions for physics

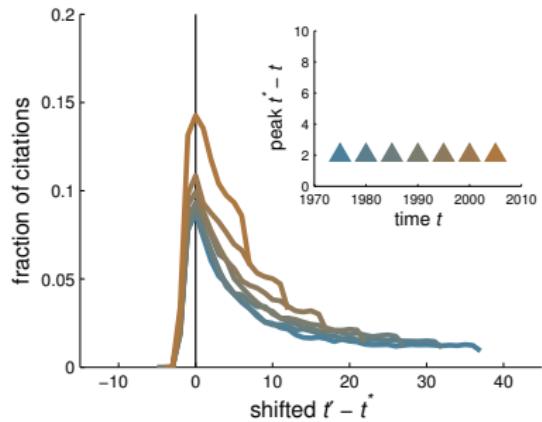

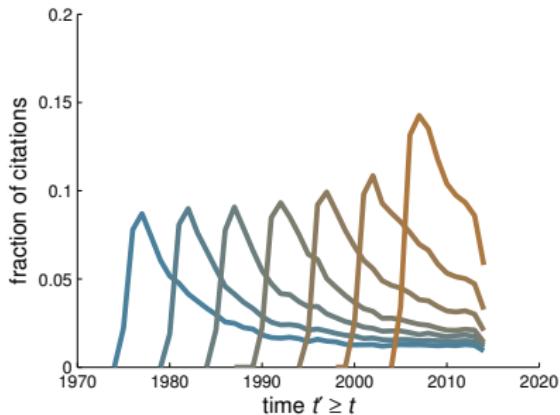

## paper citation distributions for physics

## paper citation distributions for physics

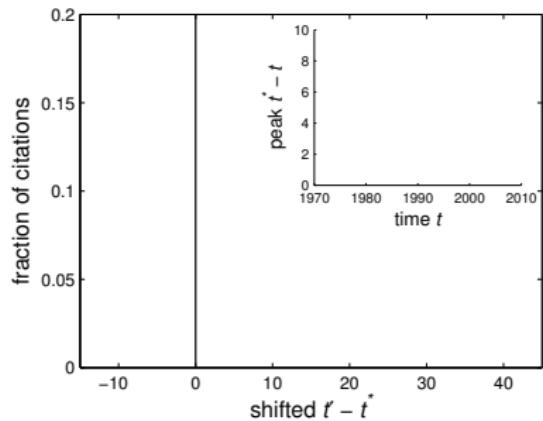

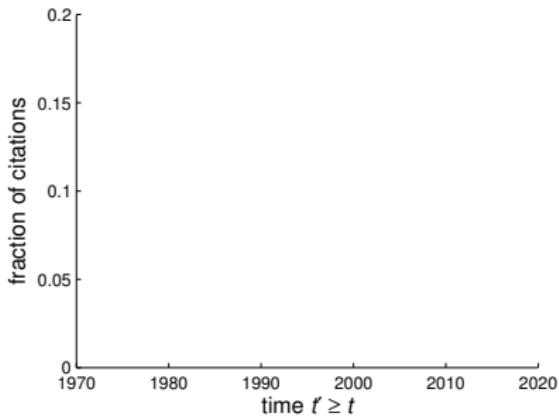

## paper citation distributions for physics

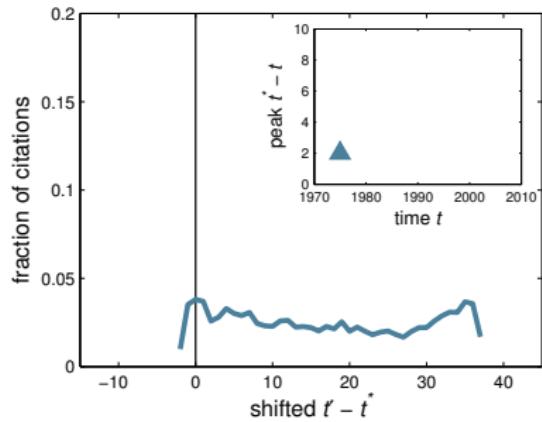

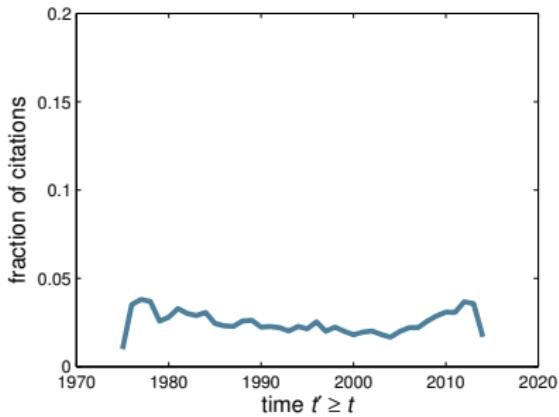

for  $t' \geq t^*$  distributions well approximated by  $\sim \frac{1}{t' - t} e^{-(\ln(t' - t) - \mu)^2 / 2\sigma^2}$

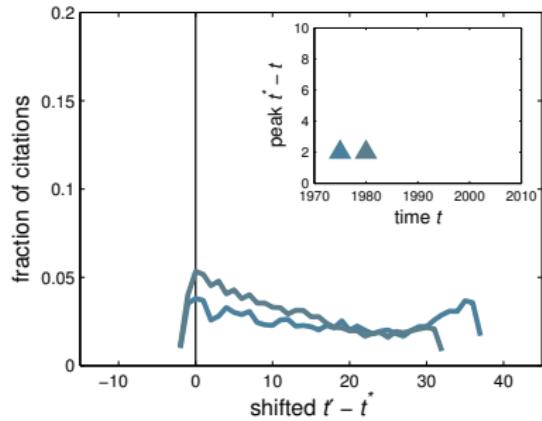

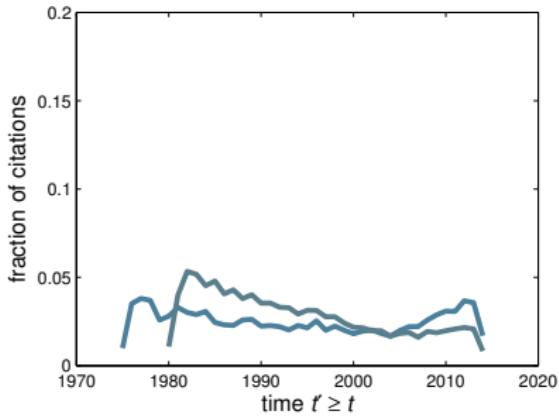

## paper **citation distributions** for **computer science**

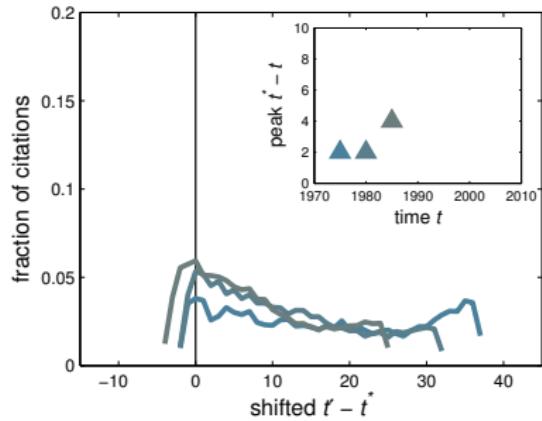

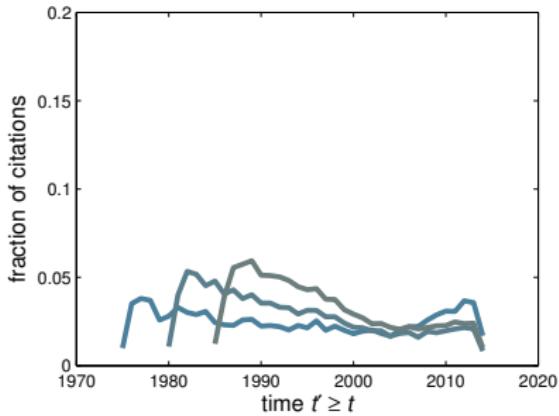

## paper citation distributions for computer science

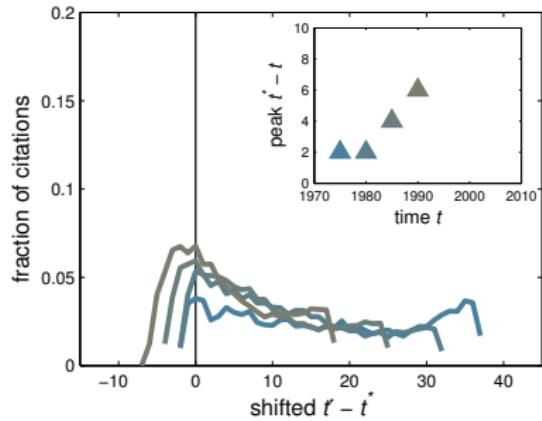

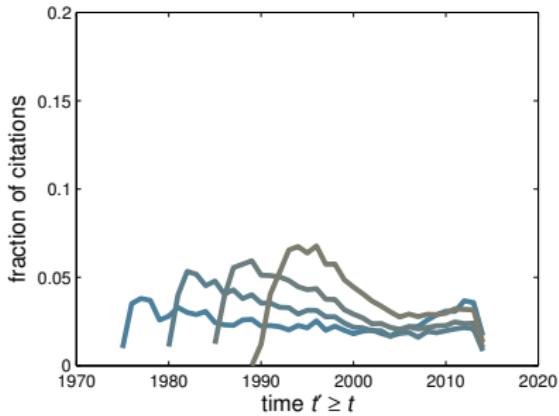

## paper citation distributions for computer science

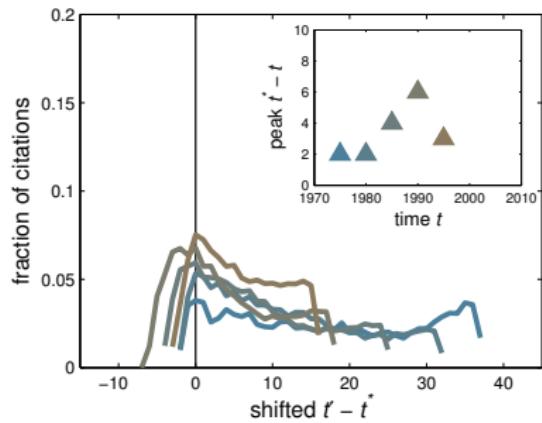

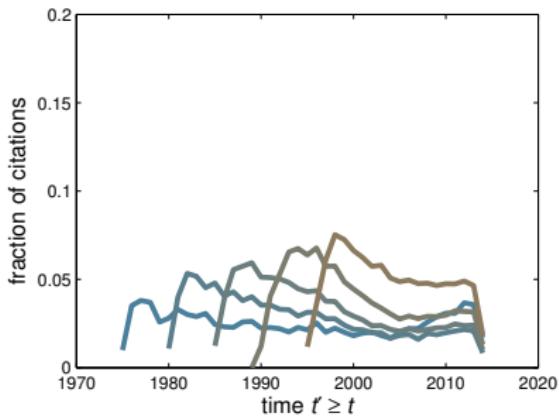

## paper citation distributions for computer science

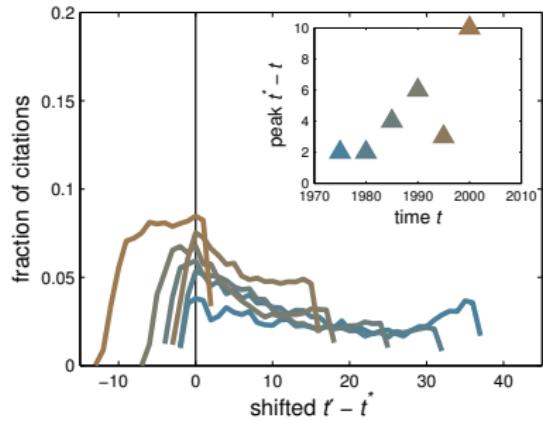

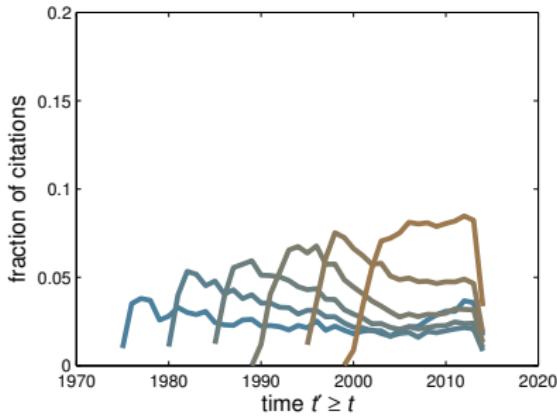

## paper citation distributions for computer science

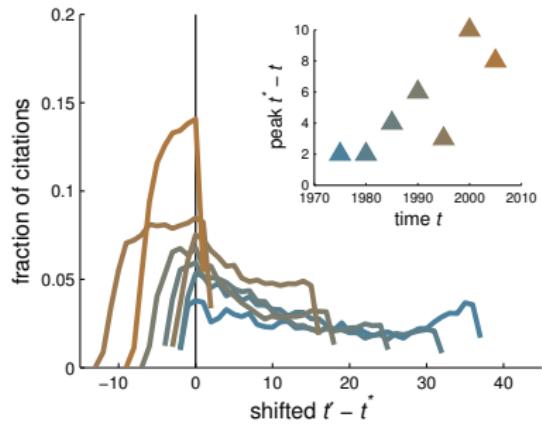

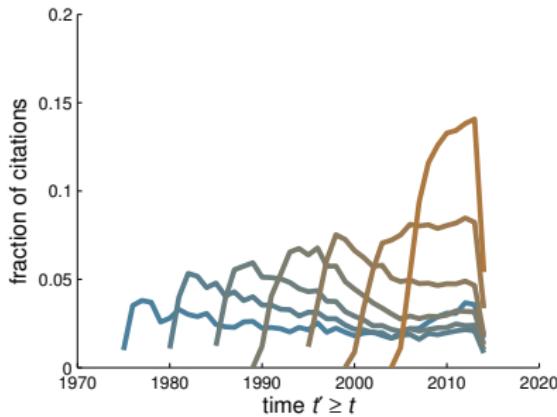

## paper citation distributions for computer science

## paper citation distributions for computer science

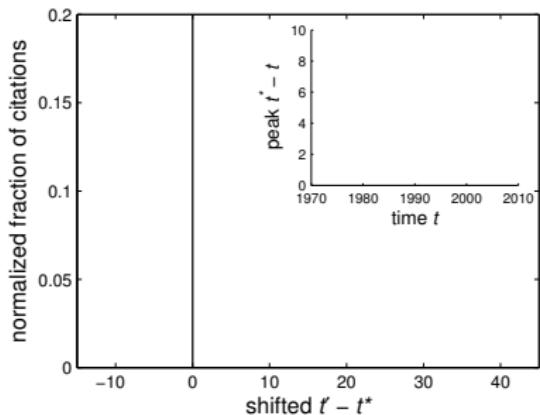

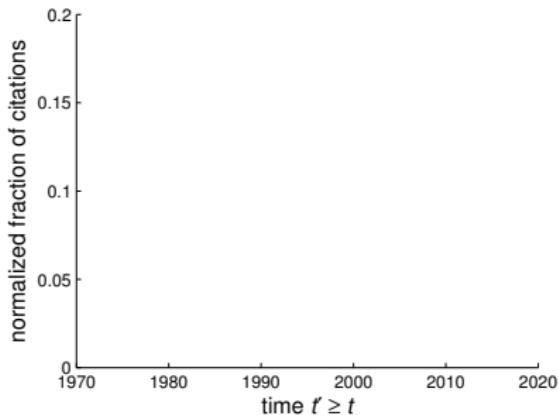

## paper citation distributions for computer science

for  $t' \geq 2000$  distributions are increasing functions of  $t'$

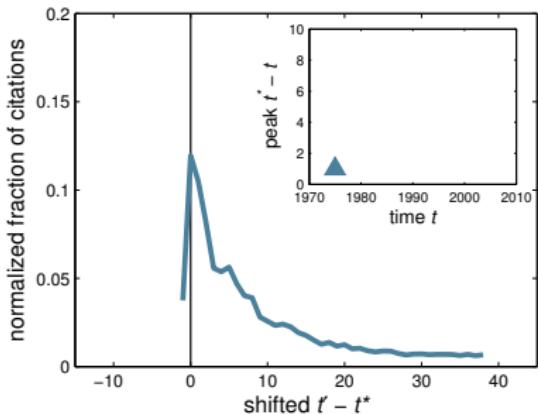

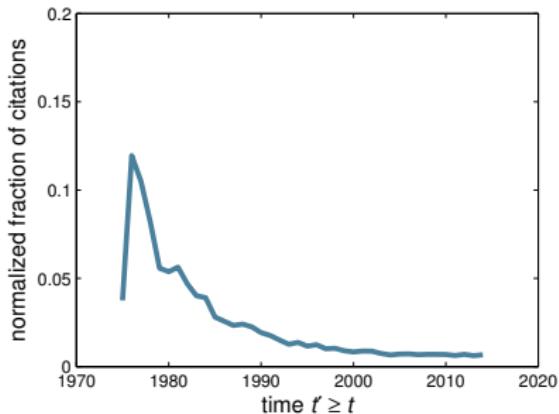

## normalized citation distributions for computer science

citations from papers in year  $t'$  count as  $1/n_{t'}$

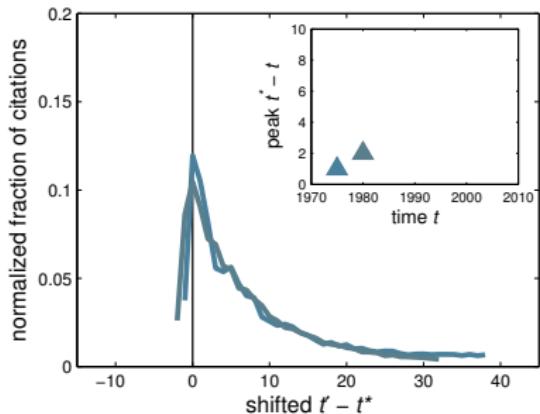

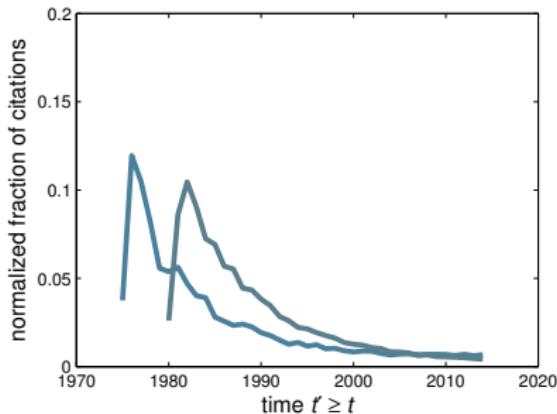

## normalized citation distributions for computer science

citations from papers in year  $t'$  count as  $1/n_{t'}$

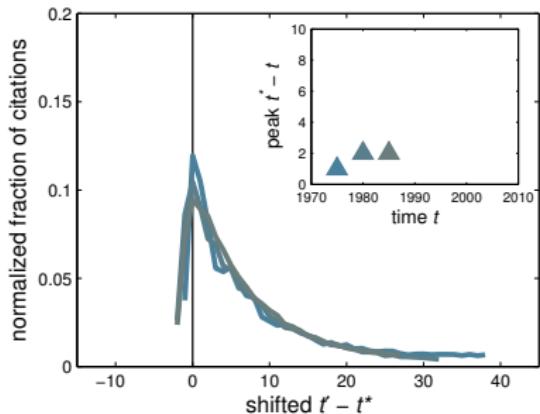

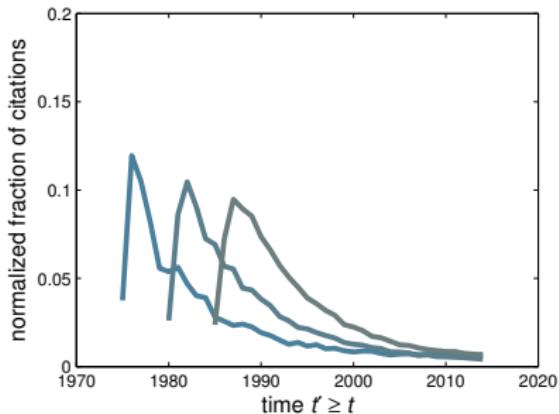

## normalized citation distributions for computer science

citations from papers in year  $t'$  count as  $1/n_{t'}$

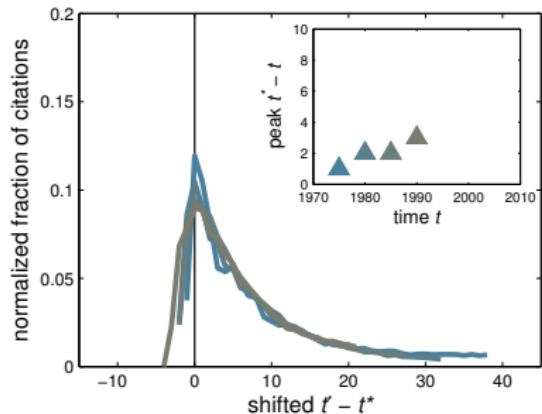

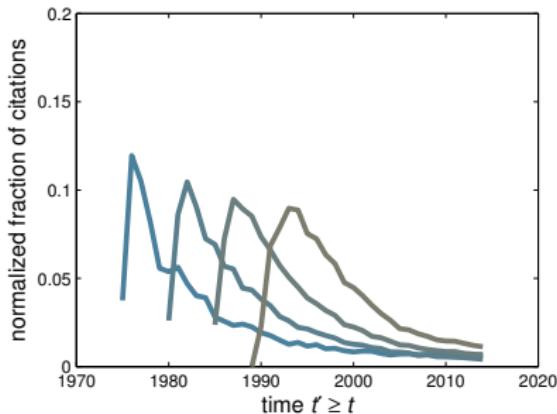

## normalized citation distributions for computer science

citations from papers in year  $t'$  count as  $1/n_{t'}$

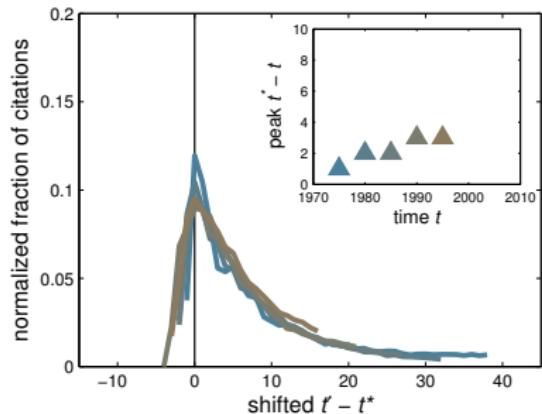

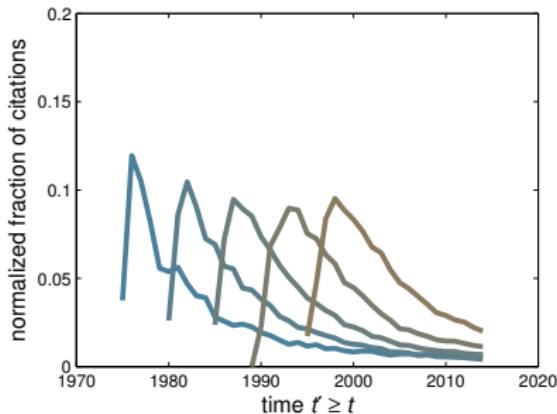

## normalized citation distributions for computer science

citations from papers in year  $t'$  count as  $1/n_{t'}$

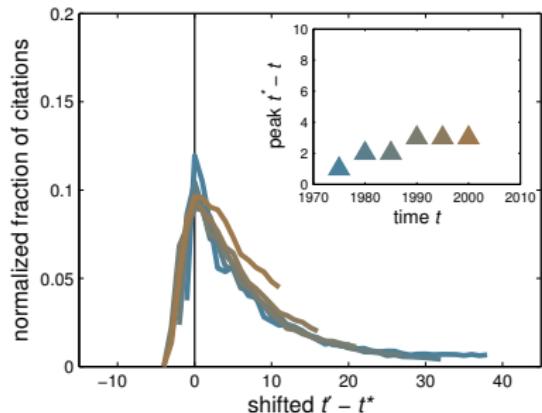

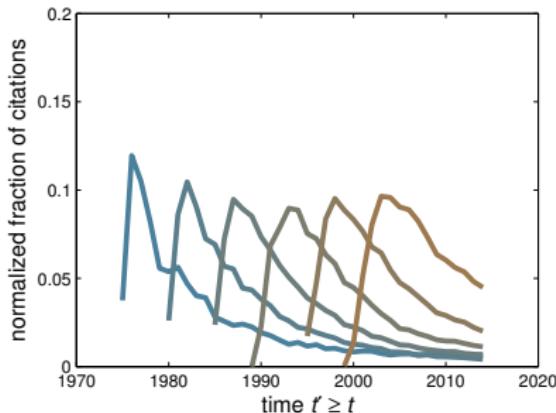

## normalized citation distributions for computer science

citations from papers in year  $t'$  count as  $1/n_{t'}$

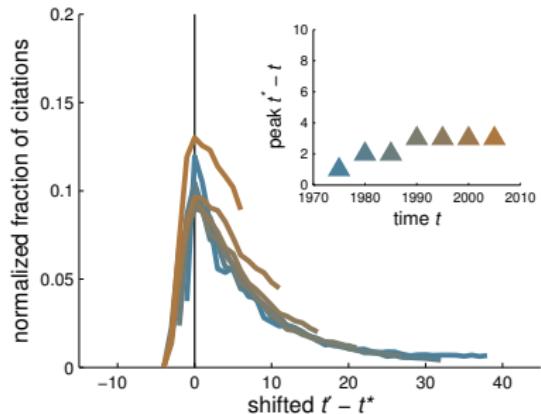

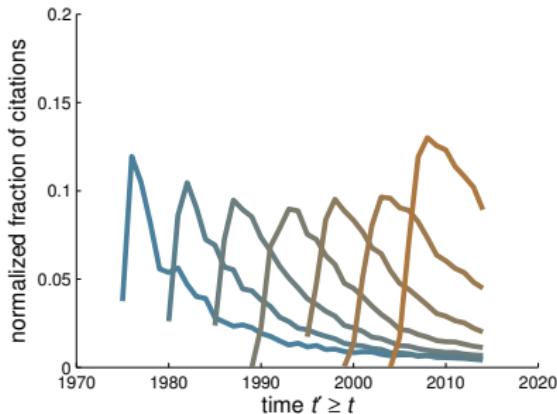

## normalized citation distributions for computer science

citations from papers in year  $t'$  count as  $1/n_{t'}$

## normalized citation distributions for computer science

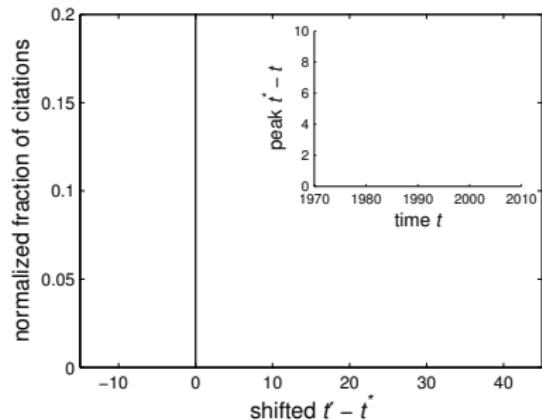

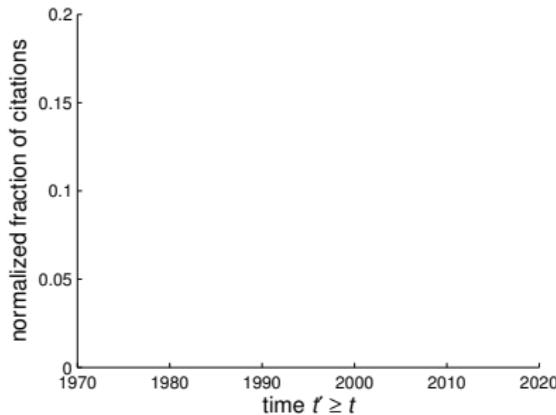

citations from papers in year  $t'$  count as  $1/n_{t'}$

for  $t' \geq t^*$  distributions well approximated by  $\sim \frac{1}{(t' - t)n_{t'}} e^{-(\ln(t' - t) - \mu)^2 / 2\sigma^2}$

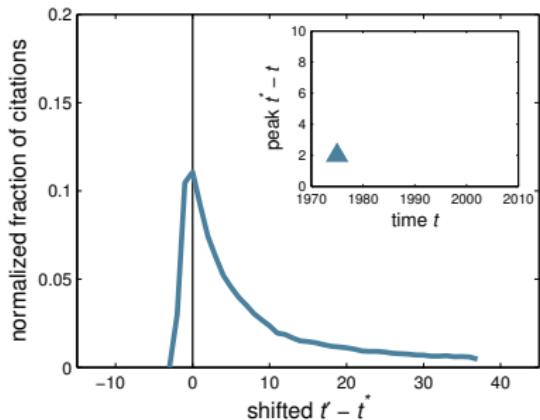

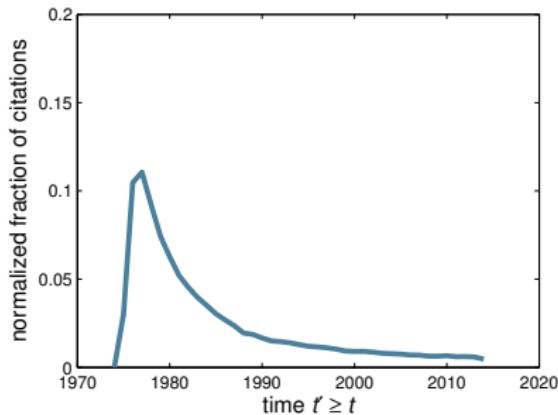

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

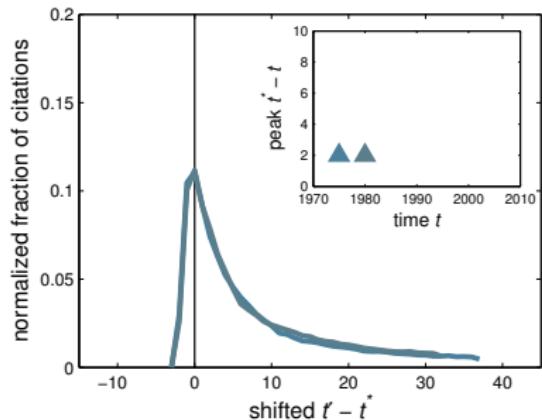

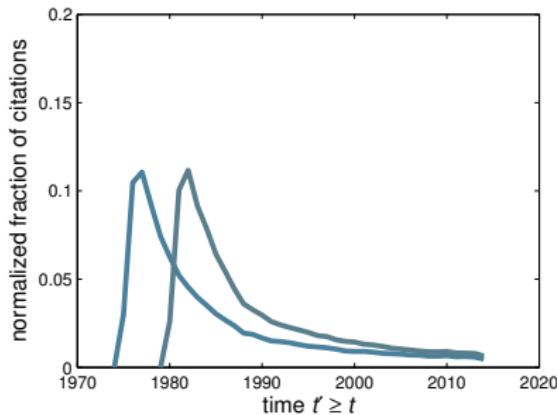

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

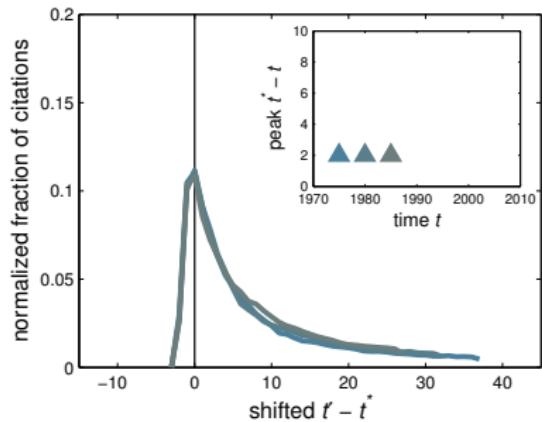

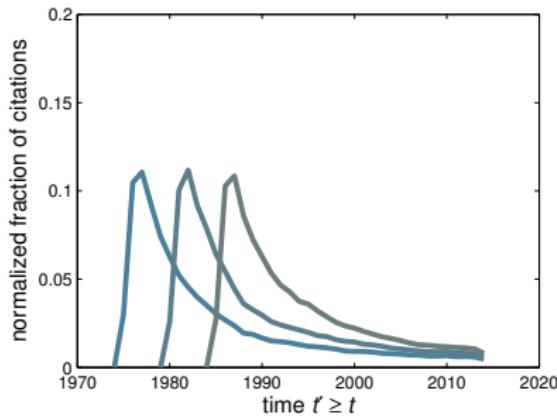

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

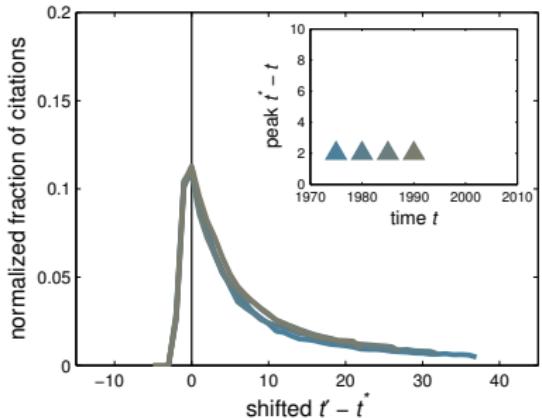

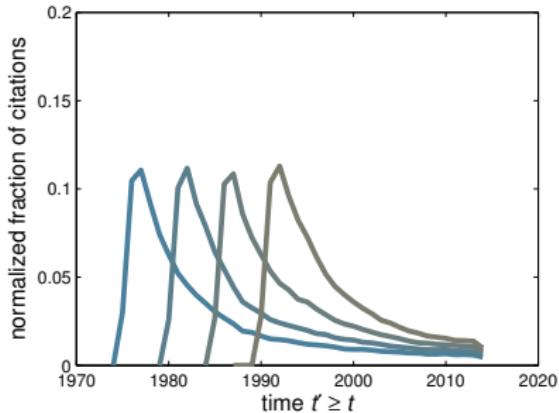

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

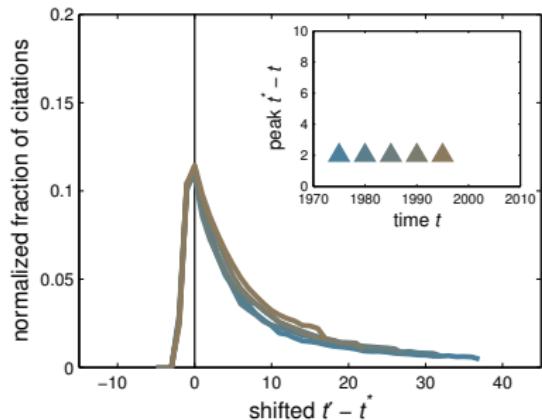

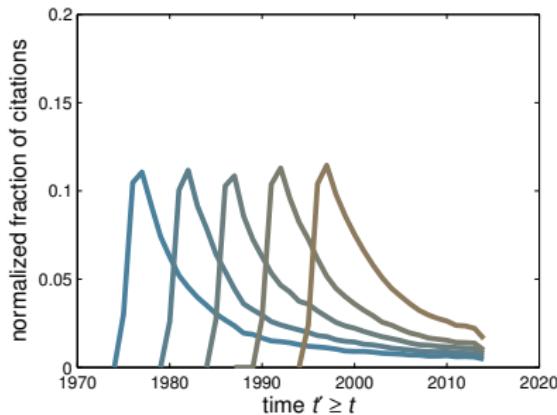

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

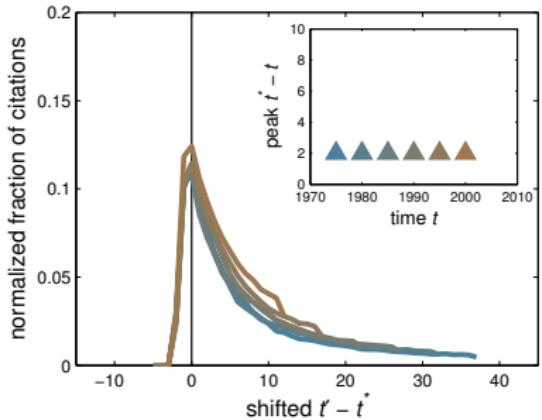

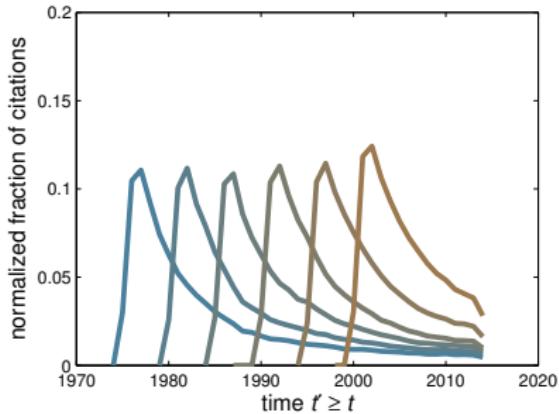

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

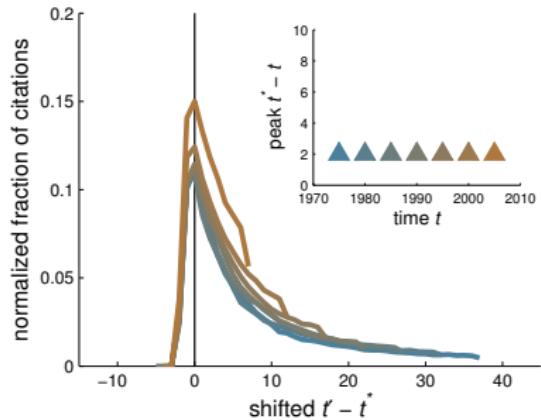

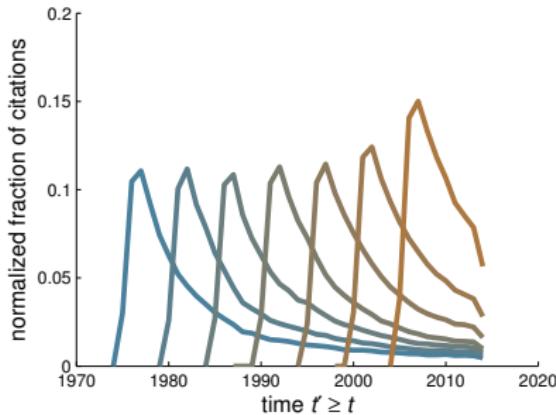

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

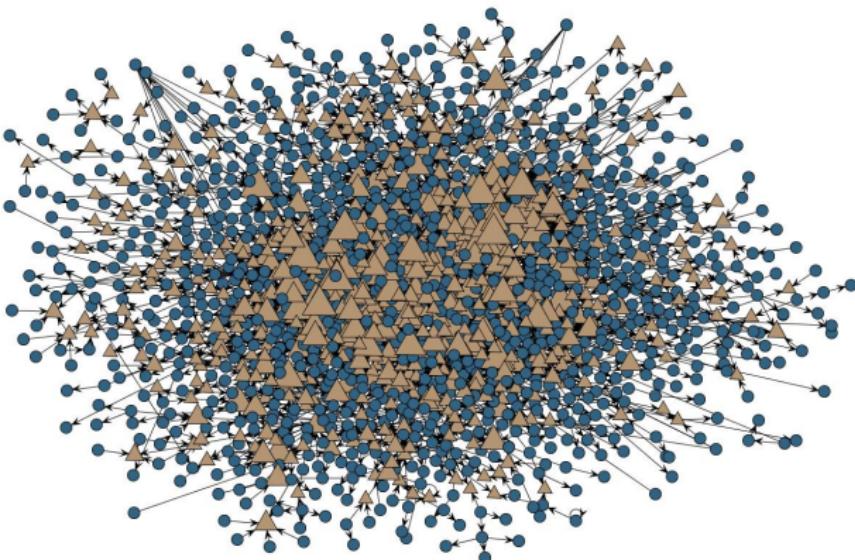

## normalized citation distributions for physics

citations from papers in year  $t'$  count as  $1/n_{t'}$

for  $t' \geq t^*$  distributions well approximated by  $\sim \frac{1}{(t' - t)n_{t'}} e^{-(\ln(t' - t) - \mu)^2 / 2\sigma^2}$

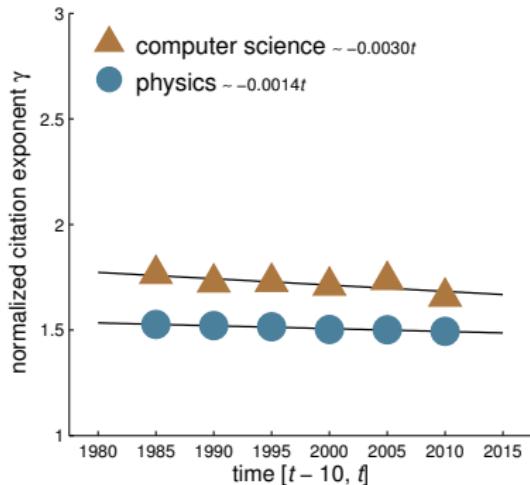

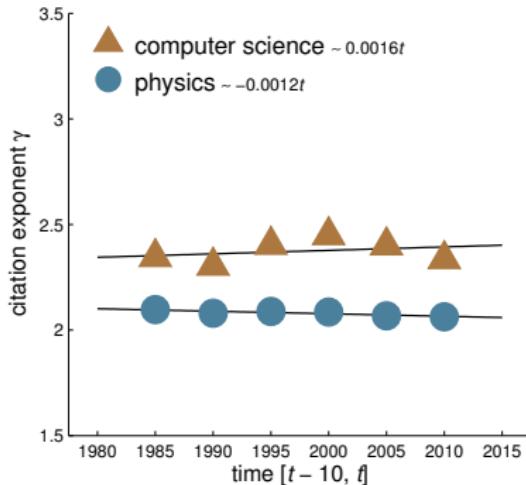

paper **citation network** from **Web of Science**

**triangles** proportional to number of citations  $c$  & **circles** few citations  $c \leq 1$

## paper citation exponents in Web of Science

citations from papers in year  $t'$  count as  $1/n_{t'}$

fraction of papers with  $c$  citations well approximated by  $\sim c^{-\gamma}$

## reference distributions

→ constant through time in **Web of Science**

## citation distributions

→ in **physics**, biochemistry, APS

↔ in **computer science**, economics, i&ls  
→ after correction for paper & citation growth

should one (not) publish in computer science?

arXiv:**1601.01203v2**
